

B.Tech IV Year I Semester (R15) Supplementary Examinations January 2023

MACHINE LEARNING

(Common to CSE & IT)

Time: 3 hours

Max. Marks: 70

PART – A
(Compulsory Question)

- 1 Answer the following: (10 X 02 = 20 Marks)
- (a) Define grid and cloud computing.
 - (b) Explain virtual infrastructure.
 - (c) Describe the objectives of OGSA.
 - (d) Formulate the OGSA grid service interfaces.
 - (e) What is Virtualization?
 - (f) Discuss design requirements of VMM.
 - (g) Differentiate name nodes and data nodes.
 - (h) How to read data from a Hadoop URL? Explain.
 - (i) Discuss on GSI.
 - (j) Define trust delegation chain.

PART – B
(Answer all the questions: 05 X 10 = 50 Marks)

- 2 (a) How virtual machine work and explain concept of virtualization?
(b) Explain about cloud services in detail.
- OR**
- 3 Discuss in detail about service oriented architecture.
- 4 Explain practical & detailed view of OGSA/OGSI.
- OR**
- 5 (a) Describe about the relation of grid architecture with other distributed technologies.
(b) What are the third-generation initiatives of grid computing?
- 6 Explain in detail, the virtualization for data centre automation.
- OR**
- 7 Write short notes on OS level virtualization. List the pros and cons of OS level virtualization.
- 8 (a) Explain anatomy of a file read.
(b) Illustrate MapReduce logical dataflow.
- OR**
- 9 Explain the Globus Toolkit Architecture (GT4).
- 10 Examine in detail about trust model for grid security enforcement.
- OR**
- 11 (a) Discuss the risk factors of network level of cloud infrastructure.
(b) How will you measure the mutual authentication between two parties? Summarize.
